**NOW IN FULL BLOOM**  
**LANTANA callowiana Goldrush**  
**(Plant Pat. No. 1211)**

Trailing yellow — an entirely new species produced from the hybridization of *Lantana camara* and *Lantana sellowiana*, retaining only the finer characteristics of each. All who have seen it are amazed and delighted, and believe it to be the finest of all *Lantanas*. Practically all year countless clusters of the brightest yellow flowers cover the entire plant. The foliage, an attractive deep forest green, makes a most pleasing color contrast with the bright yellow flowers. One of the most outstanding characteristics is its trailing habit of growth, which means it can be used in so many ways, such as ground covers, bank covers, planters, etc. This attractive, prostrate shrub, Goldrush, grows rapidly and requires very little care. Must always be sold with patent tags.
